Treatment/Anesthetic/Surgery Consent Form

I understand that I am requesting treatment and/or a surgical procedure that may require general anesthesia or sedation. There are risks associated with anesthesia and although the doctors and staff take preventative measures, there continues to be a risk of an adverse outcome due to anesthesia or surgery.

Treatment/Surgery/Other Procedure: _____

Fleas: It is important to keep our pets free of external parasites such as fleas and ticks. If your pet is diagnosed as having fleas or ticks while in the care of Tri-County Veterinary Service, your pet will be treated at an additional cost.

Initials: _____

Vaccinations: Prevention is paramount to maintaining a healthy pet; therefore, the doctors and staff of Tri-County Veterinary Service require that your pet be current on all vaccinations. Canine patients should be current on Rabies, Bordetella, and DA2PCP. Feline patients are required to be current on FVRCP, Feline Leukemia, and Rabies.

Vaccines Required: _____ **Initials:** _____

Pre-Anesthetic Blood Testing

Like you, our greatest concern is the well-being of your pet. Before any anesthetic procedure your pet will receive a comprehensive physical exam. However, there are many conditions, including disorders of the kidneys, liver, or blood which cannot be detected by physical exam alone. Pre-Anesthetic blood work provides the doctor with more information on your pet's overall health, and that information aids in making anesthetic decisions.

Pre-Anesthetic Blood Work is highly recommended before any and all anesthetic procedures. We are able to complete these tests in-house and have results in minutes. **There is an additional cost of \$45.00 for the pre-anesthetic lab work.**

- _____ **Yes, Complete the vitally important pre-anesthetic blood screening.**
- _____ **No, I understand the risk of not completing the pre-anesthetic blood work and wish to decline testing.**

Surgical Laser

Tri-County Veterinary Service is proud to offer laser surgery for your pet at our Anna office. During your pet's procedure rather than using a scalpel blade to make incisions, a surgical laser will be used. Using the laser reduces pain, swelling, bleeding, and risk of infection. **The additional cost for use of surgical laser technology is \$61.00.**

- _____ **Yes, please use laser technology for my pet's procedure.**
- _____ **No, I do NOT wish to have the laser used for my pet's procedure.**
